Swinging Door

Multi-Point Hardware

Swinging Door

Multi-Point Hardware

Trilennium™ Multi-Point Hardware system provides more than just security . . . it offers homeowners better door closure and sealing than a single point lock. Featuring a durable and ergonomic design that allows for easy door operation.

I-beam construction incorporates greater strength, stiffness and security into the complete lock system. Its performance exceeds most industry standard security requirements.

Fabrication is easy utilizing W&F's template system, or for high volume automated routing equipment. Once the door is fabricated the lockset is 'let-in' and held securely into place with six mounting screws.

French Trilennium™ systems are available for the secondary panel of French-hinged applications with matching handle sets.

Varieties of handle sets and finishes available for your unique door or we can match a custom design to your needs.

Security and functionality are paramount when choosing door hardware, and you'll find both in Trilennium™, a truly innovative Multi-Point Hardware solution from W&F Manufacturing.
